DEPRECIATION STATEMENT

ESTIMATION WORKING RESULT

INTRODUCTION: Commercial poultry production is 48 years old confining only to the country popularly known Desi breeds. Since 1970 this poultry industry has undergone a phenomenal growth making the industry the fastest one. One production of increased in a high level after the adoption of hybrid birds.

The production of eggs has 79% from genetically improved layer and 21% from country popularly known Desi birds. India is the fifth highest egg producer in the world and the per capita consumption is now only 70. The Indian Council of Medical Research and National Institute of nutrition suggested 180 as the ideal level of consumption that resulted in going for hybrid poultry production.

Broilers were unknown in India before 42 years, as years past this variety occupied a good position among the Indian population. Now the poultry industry contributes about Rs. 1,10,000 cores to the GNP of the country. Moreover the export also increased from a meagre 0.05% to a whopping 4% today.

The poultry has distinct advantages over other vacations because:-

1. Small land requirement
2. Faster returns
3. Small initial capital investments
4. Planning for uniform and regular flow of income
5. Wider scope for expansion due to lower competition
6. Employment generation potential.

Poultry eggs and meats are important source of high quality proteins, minerals and vitamins to balance the human diet. Eggs are considered to be the nature's marvel providing the best quality protein food. An egg contains:-

1. Water - 74.0%
2. Carbohydrate -0.9%
3. Proteins -12.4%
4. Fat -11.7%
5. Ash -1.0%

Except this, an egg has calcium, iron, phosphorus, vitamin A, B, D, riboflavin and nicotinic acid. The presence of all these ensures better eye sight, healthy skin. Strong nerves, free from rickets, healthy mouth, tongue, lips, eyes and a glowing healthy skin.

Poultry meat is low in fat and rich in proteins and is recommended to patients with high blood pressure rather than other non-vegetation food items. Poultry manure contains nitrogen. Phosphorous, potassium and others organic matters. This is ideal for use in agriculture, thus has a good market potential.

ORGANISATION: - The promoters Descriptions,

(Should be written in details of address, experience regarding promoters)

SCOPE: Agriculture is the core sector of Indian economy and poultry fanning is considered as a major part of agriculture and allied activities. All districts of West-Bengal is ideal for this type of farming since the production and productivity is low in direct agriculture. In orders to increase the economy of the area poultry farming is recommended.

Though the per capita requirement of eggs in India is 180, India produces only 70 to 72 eggs per capita per year. Out of the total requirement of West Bengal it produces presently 4745 million and the rest is supplied by Andhra Pradesh.

West Bengal is considered as the 2nd largest consumer of egg,

The strategic location of Bengal provides good conditions for poultry fanning. This area has hot weather during April and May and the same come down in the next months. We can experience cool nights for a major period due to the monsoon.

TECHNICAL FEASIBILITY: While farming the Project Report special care is given in the different areas to special care is given in the different areas to ascertain the technical feasibility of the same.

The chicks i.e. Babcock BV 300 layer chicks are easily available from Eastern Hatcheries.

Good and balance nutrition Poultry feed is available in the market easily

The management of the proposed poultry farm will be safe at the hands of well experienced and highly know ledged supervisors. The promoters have identified them.

The required veterinary care and guidance will be available from West Bengal Government Animal Husbandry Dept., West-Bengal State Poultry Farm, Disease diagnostic Lab. University of Animal Resource and Fisheries Science of West Bengal, Veterinary Surgeons and Poultry Experts. The promoter has contacted them for an initial discussion over the matter and the same has been assured by them. Moreover, our veterinary doctor should be take care of our farm,

MARKETING ARRANGEMENTS: As stated earlier, the per capita egg production is very low in our country; it is felt that the gap between the requirement and supply is to be a bridged in order to improve the health condition of the poor people of the country.

West-Bengal has been shortage of eggs and fully depends on Andhra eggs and boosting the production of eggs can make up the requirements

Kolkata, the largest consumer of egg, and it is mainly depends on the Andhra Pradesh eggs. If the product is supplied to the Metropolitan city at a less cost than the Andhra Pradesh based supplier, in a short period, the unit will not find any difficulties in marketing the product.

Culled birds are in great demand due to its high protein value and less price. Moreover, people prefer Broiler chicken due to its fleshy nature.

The gunny bags are early acceptable to the market because it can be used for packing agricultural products.

Poultry farm manure is the best choice for farmer due to the high mineral values and Fish Farmer's used the manure presently a good source of Nitrogen, Phosphate and Potash.

ESTABLISHMENT OF POULTRY: The proposed unit has a well selected site which has the following advantages of a typical poultry site.

- # It is situated near the urban area giving easy access to chicks, feed, medicine, vaccine and market.
- # The site is well connected with motor able road even during rainy season.
- # Direction of shed will be East –West which shall strictly followed,
- # The site possesses good water distribution arrangements.
- # The proposed site is at an elevated place.
- # There is no commercial poultry farm within the periphery of 0.5 K.M
- # The area does not having any Water bodies nearby the farm site, within 0.5 K.M
- # The site is safely away from other small farms ensuring tough access to infectious diseases.
- # The area does not have any probability for stagnant water.

REARING OF BIRDS UNDER CAGE SYSTEM: This is the more scientific system than the usual deep litter system, considering the growth of population and the cost of building construction the poultry farmers are moving from the deep litter system to cage system.

The chicks are reared in different cages according to the age of the chicks.

BOODER CAGE: This system includes Brooder cages where chicks up to 8 weeks age are kept. The floor is covered with a paper to avoid damage of chick's legs.

GROWER CAGE: The chicks are reared under the system in a three-tier basis and the Birds of age up to next 12 weeks are kept.

LAYER CAGES: This is the cage where chicks of layer age are kept. Here the chicks are kept for 52 weeks up to culling.

Advantages under Cage System

Deep litter system	Vs.	Cage system
I) more shed space		Less shed space
ii) More feed consumption		Less feed consumption.
iii) High Mortality		Low Mortality.
iv) Less number of eggs		More no. of eggs.
v) Higher Investment		Low investment.

Floor space required (under cage system)

1. Brooder shed (0 -8 weeks)	0.50 sq.ft.
2. Grower shed (9 -20 weeks)	0.75 sq.ft.
3. Layer shed	1.00 sq.ft.

MANAGEMENT OF LAYERS:-

These birds are shifted from grower cage to the layer cage just before they start laying eggs. Here special care is given to the chicks as this is the stage in which the farm generates profits for its survival.

Here the birds are kept under light because light acts as the powerful stimulant to the birds. This artificial light can be provided by fixing electric bulbs.

FEEDING:

High quality balance diet will be used in farming chicks/starter feed up to 8 weeks of age, grower feed for 9-16 weeks of age, and layer feeds for 17 -72 weeks of age shall be purchased as per requirement regarding on the age group of the layers. The detailed requirement schedule has been incorporated in the project report us per I S I standards.

	<u>METABULIC ENERGY</u>	<u>CRUDE PROTEIN</u>
Chicks Mash	2850-2900 KCAL	21
Grower Mash	2750-2800 KCAL	19
Layer Mash	2350-2750 KCAL	16 -19

This has been assessed as the standard one and the same may vary as per the climatically change from time to time.

WATERING OF THE BIRDS: It is always necessary to use fresh and clean drinking water. Cool drinking water supply for flock from Deep tube-well/Bore well through overhead tank and pipeline is to be given to avoid contaminations from Bacteria, fungal & virus etc. It is available in the farm as existing mini deep tube well with overhead tank and circulated in the farm by pipelines.

DISEASE PREVENTION/CONTROL:

- i} Clean sanitary conditions for poultry sheds and equipment, balanced feed, fresh clean water, are essential to prevent diseases of the flocks.
- ii} Entry of visitors is to be avoided to the farm, especially inside the sheds. If visitors are asked to dip their feet in a disinfectant solution and also wash and clean their hands and asked to wear aprons and boots, provided by the farm.
- iii} Proper vaccination schedule and veterinary guidelines are to be followed.
- iv} High quality vaccination will be purchased from reputed manufacturers.
- v} Dead birds should be immediately removed from shed and will be sent to laboratory for diagnosis or buried/burnt suitable away from the poultry shed.
- vi} The waste of the farm should be suitably disposed off. Different workers! Should be employed in brooding and layer sheds.
- vii} Any bird showing advance signs of a disease, should be removed from the shed and culled, it can be sent to laboratory for diagnosis.
- viii} Birds showing preliminary symptoms of disease should be shown and diagnosed by veterinarians and their recommendations should be followed so for medications/treatment are concerned.

- ix) Rats are important carriers of poultry disease, hence to be avoided; suitable rat poisons/rat traps to be used.
- x) Many poultry medication can be given in drinking water, in measured quantity of water, so the entire medicine will be quickly consumed and there will be no wastage of medicines.
- xi) Mild infection of a disease may cause mortality, and reduced growth. Hence good track record is to be maintained,
- xii) Separate workers will be engage for the different activities of the farm.
- xiii) Guidelines in regard to bio-security of Government of India will be followed as far as possible,
- Xiv) Veterinary Doctor will be take care the unit activities regarding poultry management, feed, bio-security, and also the poultry health in the farm.

Table-2

VACCINATION SCHEDULE

Effective and proper vaccination programme in layers is necessary to prevent mortality and losses from many dreadful poultry diseases. Vaccination programmes are available against the major poultry diseases viz., Ranikhet, Marek's disease and Fowl pox.

Vaccination Calendar

The vaccination schedule is a general guide. Each farm and area will require some changes in the schedule. Following table can be used as a general guidance.

Age in days	Vaccine	Administration
For Commercial layers		
0	Marek's	Subcutaneous injection (s/c inj.) at hatchery
7	Ranikhet F/LaSota (lentogenic)	Eye drop
14-16	Live intermediate infectious bursal (IBD) Killed IBD (optional)	Eye drop 0.2-0.3 ml. a chick s/c inj. on the same day.
13-20	Infectious bronchitis (IB)	Eye drop
24-26	Live intermediate IBD	Eye drop
28-30	Ranikhet LaSota	Eye drop
38-40	Live intermediate IBD (Optional)	Eye drop/drinking water
49-56	Ranikhet RDVK/R2B (mesogenic)	s/c inj.
63-70	Fowl pox	Wing web puncture
84-91	IB (optional)	Drinking water
119-126	Ranikhet RDVK/R2B (mesogenic) or killed RD	s/c inj.

After peak production every 8 weeks Ranikhet Lasota via. Drinking water.

Note:

- i) It is necessary to keep proper records of date of vaccination and on vaccines used including type, batch no., and serial number, date of purchase and date of use of vaccine. This is essential for insurance claims.
Vaccination against Gambaro disease is advised in endemic areas
- ii) The latest vaccination schedule as suggested by Department of animal Husbandry.

Learn the Technical Terms

BROODER	0 – 8weeks
GROWER	9 – 16 weeks
LAYER	17 – 72 weeks
CULL	Sale to market as culled Bird,

17 POINTERS FOR BIGGER EGG PRODUCTION:

1. **Quality Bird:** Babcock BV300 birds, strain will perform best and is known to have good viability under these types of environmental conditions. Good chicks may cost more but they will perform better. Hence this practices to be followed in the farm.
2. **Housing:** There should be ample fresh air in this cage system. We have good land as one side and cultivated land on the other. So free air and proper ventilation is available.
3. **Crowding:** Crowding is avoided since the farm follows cage management.
4. **Feeding:** Fresh feed should be given to the birds,
5. **Watering:** Deep well water will be supplied through overhead water tank and pipeline. Hence any type of contamination can be overcome.
6. **Lighting:** Light will be maintained as per proper light schedule. There is standing by generator of the firm. So, maintaining proper light schedule is possible.
7. **Vaccination:** Expert's schedule from vetty, Dept. and reputed manufacture will be followed as per vaccinations schedule of commercial layers.
8. **De-Beaking:** Correct debeaking programme, to be followed as poor De-beaking can adversely effect egg production.
9. **Culling:** Unsuitable and uneconomic birds are to be timely culled.
10. **Health:** Watch for early signs of disease for its timely treatment before it flares up in a big way, some of the symptoms that indicate the onset of disease problems are drop in egg production and feed consumptions, increased morbidity and mortality, inactivity and lack of vigour, droopy ruffled appearance and respiratory distress. Sudden change in egg quality ese. Those points are to be taken care. Expert doctor will be engaged.

11. **Sanitation:** Sanitary measure is of vital importance in poultry operation. Keep roundworms, tapeworms and cecal worms under control. External parasites can cause serious farm hazards and can reduce production if unchecked. De worming at regular intervals should be practiced. Disinfection's and timely cleaning will be done at regular intervals by using required disinfecting medicines and cleaning materials and chemicals.
12. **Egg Quality:** Respiratory and intestinal disease should be kept under control for the maintenance of quality of egg shells. Indiscriminate use of sulpha drug can effect the egg shell quality. The use of tetracycline can however, improve it.
13. **Records :** A daily record of live stock birds register, feed stock, raw materials stock, mortality, culling, sales register, flexed assets register, godown stock registrar. Equipment stock, medicines and vaccinations stock (also expiry) cash book, ledger income and expenditure, records are essential to help, improve farming efficiency. This will help pinpoint any emerging trouble and its timely solution.
14. There should be
 - Visitor register, (preferably restricted),
 - Vehicle entry register (that should be entry after disinfection and cleaning before the gate entry)
 - Disinfect spray schedule register and that protocol of disinfect
15. **Routine checking:** All critical items of management should be listed on a daily, weekly or seasonal check list. Every item must be checked. It helps to locate the cause of trouble when it occurs. Routine checks are cleaning and refilling of drinkers feeders, cleaning of house and spraying insecticide, culling of birds, checking all electrical lines, cleaning the bulbs/lamps, egg collections, packaging, marketing etc.
16. Regular health check up program for the workers and all in the farm premises
17. **T.L, Tender Loving Care.**

POLLUTION CONTROL MEASURE

The poultry farming is the Agro-based Industry and the proposed Farm site is far distance from the population and maintain to new population policy but no population clearance is required for set up the farm two sides of the proposed land are by forest Land and Forest also.

The unit will be maintaining the following steps.

1. **Emission:** Stand by Diesel Generator room will provide with residential silencer. Stack of silencer will be height not more than 15 ft.
2. **Water:** For maintaining the farm, company will be having own deep tube well for meet up the necessity of the water for the unit. There is no chance of pollution water for consumption of Poultry Birds and domestic (Staff and others).
3. **Solid waste:** Poultry Manure is organic manure. The farming will be totally cage farming it will be hygienically maintained and the manure will be sales at a good demand for 1. Direct agriculture, 2. Fisheries, 3. Vermi culture for Bio fertilizer.
The manure having good source of calcium, nitrogen, phosphate, potash will be helpful to direct agricultural for good source of organic manure instead of chemical fertilizer.
4. Good Housekeeping to be maintained as a Professional farming and the farm fully rearing by cage system.
5. Tree planting will be three meters distance along the periphery of the farming.
6. Vacant area should be converted into vegetable cultivation, horticulture and floriculture.
7. **Staff Parameter:** There should be urinals and latrines and domestic effluent to be discharged through septic tank to soak pit within the farm area.
8. Cost of tree plantation will be minimum as a level of project and it may be maintain possibly from the cost of boundary and fencing and it will be maintain from companies own fund.

SOCIAL OBLIGATION:

Company/unit should be careful about the areas social development, like rural health, education & educational materials etc. and units will be try to up liftment of rural poverty through different way of social services in that particular area. Employment is the main source of economic up liftment of that area. Besides the economic up Liftment Company will be try to develop the area's own culture when the area is the backward area in west Bengal

BIRD FLOW CHART

1+1+5 system

B. No.	Brooder Shed	Grower Shed	Layer Shed 1	Layer Shed 2	Layer shed 3	Layer shed 4	Layer shed 5

CULL'S BIRDS SALES

Available

Rate of Gunney Bag Saled / Per Bag

SL.NO GROUP AND PARTICULARS
A. LAND DEVELOPMENT :-In Acre (11-14 acre)
B. SHED & BUILDING

- 1 Land Boundary In Acre
- 2 Cost of Infrastructure development
- 3 Brooder/ Chicks Shed sq. ft
- 4 Grower shed sq ft
- 5 Layer Shed's 5 nos in sq ft

- 6 Office Building sq ft
- 7 office Furniture and Computers & Printers
- 8 Egg's store sq ft
- 9 Generator Room
- 10 Supervisor and Workers Quarter sq ft
- 11 Managers Quarter sq ft

C CAGES AND EQUIPMENT
1 Chick's/ Brooder Cage no of Birds Nos
2 Grower's cum Layer Cage no of Birds Nos
3 Layer Cage's no of Birds Nos

- 4 Other Poultry Keeping Equipment L.S

D. INTEGRATED FEED PRODUCTION :-

- 1 Feed store (Sq Ft)
- 2 Feed conveyor for Grower & Layer Birds
- 3 Feed Trolley for Grower & Layer Birds
- 4 Godwon for Packing Materials

E. WATER SUPPLY SYSTEM

- 1 Cost of Borewell
- 2 Cost of Water Pump with system
- 3 Cost of water overhead Tank
- 4 cost of water main Line Birds nos
- 5 Cost of water distribution Line Birds Nos
